

"Transforming Classrooms into Digital Dreams: Empowering Futures, One Click at a Time."

In FY 2023-24, AADHAAR in partnership with IFCCI, has launched **Digital Paathshaala** project at Junior High School, Garhi Shahdra, Gautambudh Nagar, Uttar Pradesh. This innovative project has transformed a traditional classroom into a vibrant digital learning environment, where, **288** students have accessibility to much needed digital resources - 8 sleek computers, a high-resolution projector, a precision scanner, and a versatile printer stand ready to turn every lesson into an interactive adventure. This marks a significant advancement in our mission to integrate technology and creativity into education.

This newly established digital hub is a gateway to a world of endless possibilities, from mastering basic computer skills to diving into the fascinating realms of coding and digital creativity.

Before this project, students had limited access to technology, with only a few laptops serving a large cohort. Now, our Digital Paathshaala offers a dynamic learning environment where technology and curriculum seamlessly intertwine. Teachers are also equipped to integrate these tools into their lessons, enriching the educational experience for everyone.

The initiative has helped bridging the digital divide by empowering students from underserved backgrounds to thrive in a tech-driven world. Our vision is to expand this innovative model to more schools, ensuring that every child has the opportunity to shine in the digital age.
